

Acme Enterprises

Company Overview

Acme Enterprises is a mid-sized company specializing in eco-friendly packaging solutions for the food and beverage industry. Founded in 2015, the company has grown rapidly, serving clients across North America and Europe. Acme's mission is to reduce single-use plastic by offering biodegradable and compostable alternatives that are cost-effective and scalable.

Core Offerings

- **Compostable Food Containers** – Made from sugarcane fiber and bamboo pulp.
- **Biodegradable Cutlery** – Plant-based utensils that decompose within 90 days.
- **Custom Packaging Solutions** – Branding and design services for restaurants and cafes.
- **Recyclable Beverage Cups** – Double-walled paper cups with recyclable linings.

Key Achievements

- Reduced over **10,000 tons** of plastic waste since inception.
 - Partnered with **500+ restaurants and food chains** globally.
 - Recipient of the **2023 Green Innovation Award**.
-

Frequently Asked Questions (FAQ)

Q1: What makes Acme Enterprises' products different from regular packaging?

A1: Unlike traditional plastic packaging, our products are made from renewable plant fibers and are designed to fully decompose within 90 to 120 days in composting facilities.

Q2: Are your products safe for hot and cold food?

A2: Yes, our containers and cups are heat-resistant up to 120°C (248°F) and safe for both hot and cold items.

Q3: Can small businesses order in low quantities?

A3: Absolutely. We offer flexible order sizes starting as low as 500 units for small cafes and local vendors.

Q4: Do you provide international shipping?

A4: Yes, we ship globally and work with trusted logistics partners to ensure timely delivery.

Q5: How can I customize my packaging with my brand's logo?

A5: We provide full customization services including logo printing, color schemes, and unique packaging designs tailored to your brand.

Q6: Are your products certified?

A6: Yes, all our products are certified by international bodies including BPI (Biodegradable Products Institute) and EN 13432 for compostability.
